

Evan Stachowiak

Data, AI, and Process Engineering · Syracuse University iSchool

emstacho@syr.edu (262) 933-0228 estachowiak.dev linkedin.com/in/evan-stachowiak-449119349 github.com/emstacho-su Syracuse, NY / Milwaukee, WI

I build AI systems with a ground-truth understanding of how real operations work. Looking for full-time data, AI, or process engineering roles starting summer 2027. Open to relocation nationwide.

RELEVANT EXPERIENCE

Data Science Intern

May 2026 to Present

E.C. Styberg Engineering & Manufacturing · Kenosha, WI

- Built a new business tracker that consolidated opportunity data previously scattered across spreadsheets and inboxes, so pipeline status is visible in one place rather than reconstructed on request
- Rebuilt tooling room inventory records, reconciling system data against what was physically on the floor and establishing a process to keep the two aligned
- Reviewed internal estimating processes, documenting how they work in practice against how they were designed to work
- Acted as technical liaison for a third-party AI tool evaluation, translating between the vendor and internal stakeholders and pressure-testing vendor claims against how the shop actually operates
- Extracted control plan and PFMEA data from a legacy quality planning tool into auditable form, standardized operation descriptions across the corpus, and mapped process characteristics to failure modes to surface IATF compliance gaps

Quality Assurance Intern

May 2025 to Aug 2025

E.C. Styberg Engineering & Manufacturing · Kenosha, WI

- Reformatted instructions and policies into a standardized company-wide format, and built a Python application to parse legacy documents into the new template (bulkDocReformat)
- Ensured all documents were properly controlled under the quality system
- Earned ISO 9001 Internal Auditor certification

Undergraduate Teaching Assistant, IST 263

Jan 2025 to May 2025

Syracuse University iSchool · Intro to HTML & Front-End Web Design · Syracuse, NY

- Selected as an undergraduate TA; supported 20+ students in HTML/CSS debugging through one-on-one guidance and example-based instruction
- Created supplemental materials translating complex front-end concepts into accessible, step-by-step demonstrations

Quality Assurance Intern

May 2023 to Aug 2023

Stainless Foundry & Engineering, LLC · Milwaukee, WI

- Managed and standardized outdated melt procedures, converting physical documents into organized digital records
- Created new documentation for each melt material, including reference images, to prevent misidentification
- Improved department accessibility for floor workers who did not speak English by restructuring the filing system
- Recognized with the SFSA Schumo Scholarship for this work and presented it at a national industry conference

PROJECTS

StyleStack (In Progress)

fsn-wardrobe.vercel.app

Next.js App Router, TypeScript, Supabase RLS, pnpm monorepo, Vitest, fast-check

- Built a wardrobe app around a pure TypeScript compatibility engine, isolated from the UI, held at 100% branch coverage, and tested with property-based generation
- CI enforces the engine isolation: ESLint bans framework imports, the package builds standalone, and the build fails if a dependency leaks in; 82 test files across the workspace

Quant Edge Tracker (Shipped)

quant-edge-tracker.vercel.app

React 19, TypeScript, Vite, Supabase, Recharts, Claude Code SDK

- Built a sports analytics platform: a data pipeline plus modeling layer that converts market lines into fair, vig-adjusted probabilities
- Stores every prediction next to the edge it claimed: across 59 predictions one strategy projected 53.0% and realized 39.6%, a 13.4 point overconfidence gap the measurement layer exists to catch

AI News Agent (Shipped)

github.com/emstacho-su/ai-news-agent

Python 3.11, FastAPI, Anthropic API, Fly.io, Resend

- Shipped an autonomous daily briefing: a hand-rolled agent loop of roughly 150 lines that researches, ranks, and writes a personalized news summary on a schedule
- Added persistent topic memory, per-item Q&A, and enforced budget caps; 373 tests with every Anthropic call mocked; later rebuilt on Claude Code Routines and the Resend MCP

EDUCATION

Syracuse University

School of Information Studies (iSchool)

B.S., Information Management & Technology

Concentration in Information Security

Expected May 2027 · Senior

Activities: Sigma Chi Fraternity

Coursework: Applied Data Science (IST 387) · Python

Programming (IST 256) · Front-End Web Dev (IST 263) ·

Networks & Cloud (IST 233) · Info Reporting & Presentation

(IST 344) · IT & Data Culture (IST 305)

SKILLS

Programming

Python · HTML/CSS · JavaScript · TypeScript

Tools & Platforms

Microsoft Suite (Excel Cert.) · Git/GitHub · Cursor · Claude

Code CLI · Codex CLI · VS Code

Data & Analytics

Statistical Modeling · Data Visualization (ggplot2) ·

Exploratory Data Analysis

Quality & Compliance

ISO 9001:2015 Auditing · Process Improvement · Document

Control

AI & Emerging Tech

Prompt Engineering · Context Engineering · Agentic AI

Workflows

CERTIFICATIONS & AWARDS

✓ ISO 9001:2015 Certified Internal Auditor

✓ Microsoft Excel Certified

✓ SFSA Schumo Scholarship Recipient

✓ VPA Leadership Scholarship

✓ SFSA National Conference Presenter

✓ ACT 35 · SAT 1540

VOLUNTEERING

Volunteer Caretaker

Local animal rescues

2013 to 2025 · 12 years

Grew up living on a horse rescue; daily feeding, grooming, exercising, and stall maintenance for rescued horses, plus care and behavioral training assistance for rescue dogs across multiple organizations.

INTERESTS

Philosophy · Quantitative Strategy · Fitness & Nutrition

Science · AI Workflow Design · Game Theory
